

There is absolutely no reason that Satellite radio should not be able to broadcast anything that they want. It's a pay service and people pay to have these options. Beyond that, saying that one group of business or people can not speak freely about public events and happenings, such as the weather and traffic, is a violation of their 1st Amendment rights. Further, it's clear that this is only an issue because radio can't deal with open competition and is spending it money on lobbyists instead of marketing to make themselves competitive with Satellite radio. This should not be allowed.

Sincerely,

Brian A. Maury
